

## **Refurbishing the rear lights**

Nearly every coupe I see has dull rear indicator lights. The brake lights seem to be fine but the indicators go dull.

The fix is simple quick easy and cheap

[First the before pic](#)

Remove the light by [undoing the two 8mm bolts](#) being careful not to lose the washers too.

Twist the two bulb units out and then the light assembly can be extracted out of the surround

[Ready to start.](#)

Using nothing but some autoglym resin polish and elbow grease and 10 minutes later:-

[ready to fit 1](#)

[another view.](#)

Finally the [After fitted pic](#). The camera does not do it justice

They look as good as new and match the brake lights now
